**INNOVATIVE PROTECTIVE
INFRASTRUCTURE**

UKRAINE → UAE

PROTECTION AS AN INVESTMENT
FOR FUTURE GENERATIONS

TO PROTECT EVERY LIFE

We firmly believe that human life is the highest value of any nation.

That is why we do not build one-size-fits-all structures, but rather protection systems tailored to the specific needs of people, communities and cities.

We want every family, every school, every business and every public space to have access to rapid and reliable protection.

That is why, for the United Arab Emirates, we offer a bespoke approach to each emirate, taking into account its architecture, climatic conditions, population density, tourism infrastructure and strategic sites.

400+
shelters

100+
audits

50-year
warranty

True luxury is protecting your family, your home and your legacy.

Ukraine became the first country of the 21st century to gain unprecedented practical experience in protecting people from modern threats such as strike drones, missile attacks, blast waves and shrapnel damage.

And it is precisely this experience that formed the basis for the creation of the Arca Emirates Collection — a range of premium modular shelters, adapted to the architecture, climate and lifestyle of the United Arab Emirates.

Safety — close to everyone

ARCA Station

Public transport
shelters.
Protection for everyone
in public places.
Urban design.

Children's playgrounds

Shelters near playgrounds,
fountains,
and water parks.
Safety for the little ones.

Public shelters

Shelters in parks,
recreational areas,
shopping centres.
Protection where people gather.

PRIVATE SOLUTIONS

Protection without compromise —
for those who appreciate the very best

Car park for premium cars

Sheltered parking for luxury cars. ARCA MAX protection class. Premium finishes to match the owner's style.

Security solutions for equestrian centres

Protection for equestrian centres based on Arca Max
A safe space for the most valuable champions.

How each shelter is created

Threat analysis

Risk assessment, selection of structural solutions, development of technical specifications

Design

Customised or adapted to international standards (CPS), preliminary testing for potential risks using engineering modelling and finite element analysis (FEA)

Manufacturing

Production of the first of a prototype prototype and conducting physical tests by state certified bodies

Field tests

Production of a second prototype. Field testing — actual confirmation of the shelter's strength: blast wave, debris, UAVs, pressure

Certification and production launch

Documentation, test reports, certification. Launch of mass modular production of shelters.

We do not rely on mathematical calculations —
we verify the effectiveness of every solution through physical testing

BUNKER-OK

PROTECT WHAT MATTERS

PRODUCT RANGE

Product range

SOTA

Modular shelters with factory-ready basic protection. Rapid deployment. Assembled using the 'LEGO' principle. For industrial, warehouse and retail spaces. Standardised sections — scalable to any capacity.

ARCA / ARCA NOVA

The strongest in Ukraine. A multifunctional reinforced concrete shelter for 5–100+ people. Tested by an explosion from a Shahed fragmentation-high-explosive UAV weighing almost 50 kg. and public facilities.

Private shelters ARCA, VOLAT

Shelters offering the highest level of protection for individuals and families. Turnkey installation with a complete life support system. Car shelters. Safe shelters with professional security.

Commercial ARCA, SOTA, VOLAT, HONOR

Shelters for businesses, residential complexes, logistics hubs, energy, agriculture and pharmaceutical enterprises. Surface-mounted and underground installation.

ARCA, SOTA, VOLAT, HONOR infrastructure

Certified protective spaces for children's playgrounds and sports grounds, public transport stops, shelters in parks and recreational areas.

Mobile shelters ARCA, SOTA, VOLAT

Fully assembled structures that can be moved between locations. Installed in a matter of hours. No on-site construction work required.

BUNKER-OK

FLAGSHIP SYSTEM

ARCA NOVA

The strongest shelter in Ukraine

- Withstood the explosion of a Shahed-136 warhead (47.8 kg)
- Double the reinforced area
- Autonomous power supply and ventilation
- Communication and Wi-Fi systems
- Sanitary solutions for self-contained use
- 50-year structural warranty
- From 5 to 100+ people

BUNKER-OK

TESTED AT THE TEST RANGE

STRUCTURAL INTEGRITY CONFIRMED BY SHANED EXPLOSION

WEIGHING ALMOST 50 KILOGRAMS

Following real-world test range trials, BUNKER-OK structures retain their structural integrity. The reinforced steel frame, engineering geometry and material composition are designed to localise damage — rather than simply withstand the impact.

“It is not the concrete that protects.
It is the engineering that works at the moment of critical load that protects.”

The ARCA NOVA series — a ground-based modular shelter

OUR ADVANTAGES

Why choose BUNKER-OK

Practical experience

Real-world projects, real-world testing.
Not theory — practical protection.

In-house production

Full quality control from design
to installation.

Installation from 48 hours

Rapid deployment without disrupting
your business.

International-standard quality

Based on real-world
field tests
and physical loads.

A personalised approach

Every solution is designed for a
specific site and client.

50-year guarantee

Structures designed for decades of
reliable operation.

A NEW STANDARD OF QUALITY

CPS — A new standard for comprehensive protection

A new benchmark for quality — developed by BUNKER-OK

BUNKER-OK has developed the world's first
CPS — Civil Protection Standard — a
next-generation quality standard.

CPS is a standard based on experience in protecting the civilian population during wartime, analytical data from impact sites, the practice of physical and field tests, and an engineering re-evaluation of what a reliable shelter should be today.

Physical stress tests —

Conducted by state certification bodies under controlled conditions

Ballistic tests —

Proven resistance to shrapnel and projectile penetration at the test range

Test range trials —

Live ammunition: Shahed-136 warhead (47.8 kg), 120 mm OF-843 mine, 125 mm shell

Engineering audit —

Analysis of real combat damage forms the basis of every project update
